1. Introduction

1.1 Purpose

This document provides a detailed design of the Campus Event Management System. It is intended for developers, designers, and stakeholders to understand system architecture, components, and functionality.

1.2 Scope

The system is designed to manage campus events including:

- Event creation and scheduling
- Student registration
- Notifications and announcements
- Event feedback and reports

1.3 Definitions, Acronyms, Abbreviations

- **Admin** – System administrator

- **User** – Student or participant
- **Event** – Any campus activity (seminar, fest, workshop)
- **DB** – Database

1.4 References

- UML Diagrams
- Software Engineering Notes
- IEEE SRS Standards

2. Use Case View

2.1 Use Cases

1. User Registration/Login
2. Create Event (Admin)
3. View Events
4. Register for Event
5. Send Notifications
6. Provide Feedback

3. Design Overview

3.1 Design Goals and Constraints

- Easy-to-use interface
- Secure login system
- Fast response time
- Works on web browsers

3.2 Design Assumptions

- Users have internet access
- Admin manages all events
- Database is always available

3.3 Significant Design Packages

- User Management Module
- Event Management Module
- Notification Module
- Feedback Module

3.4 Dependent External Interfaces

Application	Interface	Description
Email System	SMTP	Sending notifications
Database	MySQL	Data storage

3.5 Implemented Interfaces

Interface	Module	Description
Login API	User Module	Handles authentication
Event API	Event Module	Manages events

4. Logical View

4.1 Design Model (Classes)

Main Classes:

- User (id, name, email, password)
- Event (eventId, title, date, venue)
- Registration (userId, eventId)
- Feedback (feedbackId, comments, rating)

4.2 Use Case Realization

Example: **Event Registration**

1. User logs in
2. Views event list

3. Selects event
4. Clicks register
5. Data stored in database

5. Data View

5.1 Domain Model

Entities:

- User
- Event
- Registration
- Feedback

Relationships:

- One user → many registrations
- One event → many participants

5.2 Data Model (Tables)

Table Name	Fields
Users	id, name, email, password
Events	eventId, title, date, venue
Registration	userId, eventId
Feedback	feedbackId, comments

6. Exception Handling

- Invalid login → show error message
- Duplicate registration → prevent entry
- Server error → display “Try again later”

7. Configurable Parameters

Parameter	Usage	Dynamic
Max Users	Limits registrations	Yes
Event Limit	Max events per day	No

8. Quality of Service

8.1 Availability

- System available 24/7
- Minimal downtime

8.2 Security and Authorization

- Login authentication
- Role-based access (Admin/User)

8.3 Load and Performance

- Supports multiple users
- Fast database queries

8.4 Monitoring and Control

- Admin dashboard
- Logs for user activity
